Asialoglycoprotein receptor R2/3 (Hepatic lectin 2/3) (RHL-2) (ASGP-R)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           terminal galactose and N-acetylgalactosamine units. After ligand binding to the receptor, the resulting complex is internalized and transported to a sorting organelle, where receptor and ligand are disassociated. The receptor then returns to the cell membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- MISCELLANBOUS: Calcium is required for ligand binding.
-!- MISCELLANBOUS: TWO types of rat hepatic lectin have been identified, RHL-1 and RHL-2/3, having a relative abundance of 4:1. RHL-2 and RHL-3 only differs in thir carbohydrate structures.

Proc. Natl. Complex Complex Complex

"Wich the perminal sialic acid residue on thear complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its was by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to licenseeisb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             terminal galactose and N-acetylgalactosamine units. After ligand binding to the receptor, the resulting complex is internalized and transported to a sorting organelle, where receptor and ligand are disassociated. The receptor then returns to the cell membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Type II membrane protein.
TISSUE SPECIFICITY: Expressed exclusively in hepatic parenchymal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              which the terminal stalic acid residue on their complex carbohydrate moieties has been removed. The receptor recognizes

-!- FUNCTION: Plays a role as a receptor for the recognition of MHC
class I HAA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBDMIT: Can form disulfide-bonded heterodimer with CD94.
                                                                                                                                                                                                   EXTRACELLUIAR (POTENTIAL).

       J. Immunol. 168:240-252(2002).
-!- FUNCTION: Plays a role as a receptor for the recognition of WHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with NKG2 family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        125 HTAWLWENGSALSOYLFPSFETFNPKNCIAYNPNGNALDESCEDKNRYICKQQL 178

"Purification and characterization of a lectin-like molecule specific for galactose/N-acetyl-galactosamine from tumoricidal macrophages.";
J. Biochem. 104:600-665(1988).
-!- FUNCTION: Recognizes terminal galactose and N-acetylgalactosamine units. May participate in the interaction between tumoricidal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)
Macrophage galactose/N-acetylgalactosamine-specific lectin) (MMGL).

Eur. J. Immunol. 23:1643-1648(1993).

-!- FUNCTION: Involved in lymphocyte proliferation and functions as a signal transmitting receptor in lymphocytes, natural killer (NK) cells, and platelets.

-!- SUBGNIT: Homodimer; disulfide-linked.

-!- SUBCELIULAR LOCATION: Type II membrane protein.

-!- STRUE SPECIFICITY: EXPRESSED ON THE SUBRACE OF ACTIVATED T CELLS, B-CELLS, NATURAL KILLER CELLS, NEUTROPHILS AND PLATELETS.

-!- DEVELOPMENTAL STAGE: Earliest inducible cell surface glycoprotein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN) (POTENTIAL).

The invention relates to cloning of the human MARA molecule (see AAW88265) and to the discovery of splice variants (see AAW88266-67) of human MARA that are not found in rat. Polypeptides and synthetic of human MARA that are not found in rat. Polypeptides and synthetic and polynucleotides encoding them, can be used in methods for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), and tumour growth

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAFA) ligand on a target cell, and prevents or inhibits natural killer (MK) - or T-cell-expressed cell surface MAFA from binding to MAFA igand and a pharmaceutically acceptable excipient. The invention is cusful for inhibiting an NK- or T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition or to the subject, to NK or T-cell or the target cell ex; tumour cell, in an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating a cumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic T-cell (CTL), where the tumour comprises an NK cell- or CTL-susceptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is rat MAFA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.
                                                                                                                                        antigen;

The invention is beful for inhibiting an NK- or a T-cell-expressed cell surface MARA binding to a a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition

immunoglobulin hinge region polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide that is fused to the hinge region polypeptide that is fused to the hinge region polypeptide. The CH2 constant region polypeptide. The hinge region polypeptide comprises: a wild-type human 1gG1 immunoglobulin hinge region polypeptide, a mutated human 1gG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide, where the first cysteine residues; where the first cysteine is not mutated; a mutated human 1gG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide contains no more than one

CC cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is capable of at least one immunological activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polymucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct, producing the polymucleotide (operabl) linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein or polymucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanowa, carcinowa or sarcoma, rheumatoid arthritis, subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanowa, carcinowa or sarcoma, rheumatoid arthritis, collections or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence the sequence. The printed specification and is also available in electronic format directly from USPTO at sequence the sequence. The present sequence is a binding domain-immunoglobulin the sequence the printed specification becapitated. The sequence the sequence in the printed specification becapited.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LFQEYVGEDFYWIGLRDIDGWRWEDGPALSLS-ILSNSVVQKCGTIHRCGLHASSCEVAL 179

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                        This is the amino acid sequence of human mast cell function- associated antigen (WAFA), a type II membrane glycoprotein. CDNA (see AAV84198) encoding human MAFA can be obtained from myelogenous leukaemic cell line KUB12 or CDNA derived from human lung tissue. The encoded protein is similar to the rat form (see AAW88277) having an intracellular domain containing a putative immunoreceptor tyrosine activation motif (ITIM) and an extracellular lectin-like domain. 2 Alternatively spliced forms (see AAW8856-67) of human MAFA have been identified. Polypeptides and synthetic peptides (see AAW88258-64) based on these truncated MAFA proteins can be used in methods for the treatment of inflammatory and
                                                                                                                                                                                                                                                                                                             New polypeptide having a sequence corresponding to human mast cell function-associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAFA) ligand on a traget cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition on the subject, to NK or T-cell or the target cell e.g. tumnour cell, in an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating tumnour by simulating the cyclotxic activity of an NK cell or a cyclotxic T-cell (CTL), where the tumnour comprises an NK cell- or CTL-susceptible tumnour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is human MAFA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CQGSNYSTCASCPSCPDRWWKYGNHCYYFSVEEKDWNSSLEFCLARDSHLLVITDNQEMS 120

Novel human diagnostic protein #5442.

(first entry)

22-MAY-2003

ABJ37898;

```
reaction (PER) primers, oligomers, and for chromosome and gene with reaction (PER) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymolectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of stees expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating in polypeptide and polymolectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Algonolo-AB030377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at (II) are printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      71 QCSRCPNLWMRNGSHCYYFSMEKRDWNSSLKFCADKGSHLLTFPDNQGVNLFQEYVGEDF 130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                784
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II)

polypeptide and polymucleotide, by measuring the level of polypeptide expression or the amount of mucleic acid from a mammal and comparing it with another mammal not having or not predisposed to the disease. Novx polypeptide is also useful for identifying an agent that binds to Novx polypeptide is also useful for identifying an agent that binds to Novx mad a cell expressing Novx is useful for identifying an agent that both that both as the expression or activity of Novx. The antibodies and a polypeptide having 95 % sequence identify to Novx polypeptide are useful for determining the presence or amount of Novx in a sample. Novx polypeptides are useful for treating a pathological state in a mammal. The antibodies are also useful for determining the presence or amount of Novx in a sample. Novx polypeptides are useful for treating or preventing disorders or syndromes including trauma, viral, bacterial, fungal, processing an agarastic infections. They can also treat disorders such as e.g., Alzheimer's infections. They can also treat disorders such as e.g., Alzheimer's disease or a stroke. The Novx encoding nucleic acids are useful for expressing the Novx proteins, to detect. Novx many, or a genetic lesion in a NovX gene and to modulate Novx activity. NovX sequences are also useful for instruction and to modulate Novx activity. NovX sequences are also useful for use in identifying a cell or tissue type in a biological sample, to amplify has or an indentifying and/or cloning NovX homology and as primers and probes the nor and probes in other cell
                             (NOVI - 33), consisting of a mature form of one of 61 sequences, given in variant differation, or its variant, where amino acid residue(s) in the variant differ from the mature form, provided that the variant differs in not more than 15 % of the amino acids from the sequence of the mature form one more than 15 % of the amino acids from the sequence of the mature form. The NOVX polypeptides, nucleic acids encoding the polypeptides, and an antibody to the polypeptides, are useful for treating or preventing a NOVX-associated disorder in humans and for treating a syndrome associated the encoding nucleic acids, are useful for determining the presence of or predisposition to a disease sosciated with altered levels of NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          studying the function and/or activity of NOVX protein and for identifying and/or evaluating modulators of NOVX protein activity. The NOVX nucleic acids can be used in gene therapy. This sequence represents a NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     types. The NOVX proteins are useful as an immunogen to generate antibodies which are useful for diagnostically monitoring protein levels and modulating NOVX activity. Cells comprising NOVX nucleic acids are
       designated NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful for producing non-human transgenic animals which are useful for
invention relates to a novel isolated polypeptide,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence is that of human CD69. The CD69 protein is active in the regulation and function of the immune system. The protein may be used for blocking thymocyte development in in vitro systems. The soluble polypeptide can be used to competitively bind the ligand in vivo thus inhibiting signal transduction activity via endogenous cell surface bound CD69. CD69 may also be used to generate antibodies. See also AAR54660.

Recombinant cells contraining expression vectors comprising the CTL-1 conding sequence can be used to produce recombinant CTL-1 which is useful for raising Ab and to screen for specific binding agents Binding agents which are antagonists of CTL-1 can be used to treat or prevent cancer, e.g. of ovary, paraganglion, penis, brain, thyroid and heart which are used to diagnose these conditions, as probes or primers in usual hybridisation and/or amplification assays, or for gene mapping, while complements of this sequence, antisense or ribozyme sequences are used to treat or prevent the aforementioned cancers also. Ab are used directly as antagonists or for delivery of therapeutic agents to cells that express
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Binding domain; immunoglobulin; fusion protein; cytostatic; antiatrhritic; immunosuppressive; antidiabetic; antithyroid; neuroprotective; hinge region; immunoglobulin heavy chain; CH2 constant region; GH3 constant region; IgG1; antibody dependent cell-mediated cytotoxicity; ADCC; complement fixation; antibody dependent cell-fisorder; melanoma; carcinoma; sarcoma; rheumatoid arthritis; myasthenia gravis; Grave's disease; type I diabetes mellitus; multiple sclerosis; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         45 VMNVVFITILIIALIALIALSVGQYN---CPGQYTFSMPSDSHVSSCSEDWVGYQRKCYFIST 101

The Invention transfer to a binding domain-lumunoglobulin tusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, and immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the CH2 constant region polypeptide. and an immunoglobulin heavy chain CH3 constant region polypeptide that is fused to the CH2 constant region polypeptide. The hinge region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the first cysteine is not mutated, a mutated human IgG1 immunoglobulin hinge region polypeptide derived from (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains contains a cysteine region polypeptide contains of the mutated human IgG1 immunoglobulin hinge region polypeptide derived from (a) having 3 or more cysteine residues, and a mutated human IgG1 immunoglobulin hinge region polypeptide contains of cysteine residues. The binding domain-immunoglobulin hinge region polypeptide contains of cysteine residues. The binding domain-immunoglobulin hinge region polypeptide contains of cysteine residues. The binding domain-immunoglobulin fusion protein is capable of at least one immunological activity comprising antibod. Construct comprising the polymucleotide (operably linked to a promocer), a not cell transformed or transfected with a recombinant expression construct comprising the polymucleotide (operably linked to a promocer), a host cell transformed or transfected with a recombinant expression construct comprising the bolymucleotide (operably linked to a promocer), a host cell transformed or transfected with a recombinant expression construct comprising the bolymucleotide (operable) is respected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is subject having subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, mysthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease the present sequence is a binding domain sequence data for this patent formed part of the printed specification and is also available in electronic formet directly from uSprO at sequence. huml?DocID=20030118592. The authors have not identified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified. The invention relates to a binding domain-immunoglobulin fusion protein Sequence 199 AA;

```
Chicken 17.5.3 protein shows homology with the human CTL-1 protein.
Recombinant cells containing expression vectors comprising the CTL-1
coding sequence can be used to produce recombinant CTL-1 which is useful
coding sequence can be used to produce recombinant CTL-1 which is useful
coding sequence can be used to produce recombinant CTL-1 which is useful
cofficiently, paraganglion, penis, brain, thyroid and heart which are
ssociated with overexpression of CTL-1. Fragments of this sequence are
used to diagnose these conditions, as probes or primers in usual
hybridisation and/or amplification assays, or for gene mapping, while
complements of this sequence, antisense or ribozyme sequences are used to
treat or prevent the aforementioned cancers also. As are used directly as
antagonists or for delivery of therapeutic agents to cells that express
CTL-1. CTL-1 includes a carbohydrate-recognition domain (aa35-149) and
construction the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the constr
